

Albert Field

Recommended Marine Conservation Zone (MCZ)

Status: Under Consideration

Beadlet Anemones, Paul Naylor

Fact file

Albert Field recommended Marine Conservation Zone (MCZ) is an inshore site composed of a range of different types of habitat. These are primarily subtidal sediments ranging from muddy, gravely sands with cobbles and pebbles to areas of exposed bedrock and boulders.

With such a variety of habitats on offer, Albert Field is home to a diverse range of species including starfish, anemones, urchins and tube-dwelling worms.

Albert Field lies approximately 6km east of the existing South Dorset MCZ therefore designation of this site would increase the connectivity between protected areas.

Help us secure more Marine Conservation Zones

UK seas have the potential to be some of the most wildlife rich on Earth, but ambitious protection is needed to reverse the decades of decline.

Great progress has been made in securing protected areas at sea but there's still work to be done.

With your help we can make sure that our seas are given the protection they need to thrive once again!

"With proper protection, UK seas have the potential to be teeming with incredible life and colour, supporting thriving livelihoods and wildlife for generations to come. The return to Living Seas will, however, only be possible with an ambitious third tranche of Marine Conservation Zones."

Tony Juniper
President
The Wildlife Trusts
