# **Selsey Bill and the Hounds** Marine Conservation Zone (MCZ)

## Fact file

Situated to the south-east of Selsey Bill is the famous Mixon Hole. Thought to be a segment of an ancient river gorge, this almost vertical 20 metre high clay cliff has numerous ledges and crevices which provide homes for many marine species. Species include squat lobsters and crabs along with red algae and kelp in the shallower parts. Selsey is a crucial foraging area for three species of tern and seals also regularly use this area for foraging. Bottlenose dolphins have also been recorded here.

To the north-west of Selsey Bill, the Hounds limestone reef is covered by a fascinating array of sponges, sea squirts and soft coral. Charismatic tompot blennies and leopard-spotted gobies are frequently seen on cliff ledges.

### Help us to protect our seas

UK seas have the potential to be some of the most wildlife rich on Earth, but ambitious protection is needed to reverse the decades of decline.

Great progress has been made in securing protected areas at sea but there's still work to be done.

With your help we can make sure that our Marine Conservation Zones and seas are given the protection they need to thrive once again!

Join our supporters and become a Friend of MCZs today (it's free!)

"The designation of the third tranche of Marine Conservation Zones has given us an amazing opportunity to protect our marine wildlife and habitats for future generations. We now have 91 MCZs which is great news, but to help our seas recover we also need the Government to implement proper management and monitoring of these sites."

Joan Edwards Director of Living Seas & Public Affairs The Wildlife Trusts
