

I want a wilder future. Nature matters!

We're facing a climate and environment emergency: we must reverse nature's decline, starting now. The next Government must turn things around.

We all need:

**ambitious
new laws
for nature's
recovery**

**support for
farmers to
restore our
wild places**

**better marine
protection
to revive
our seas**

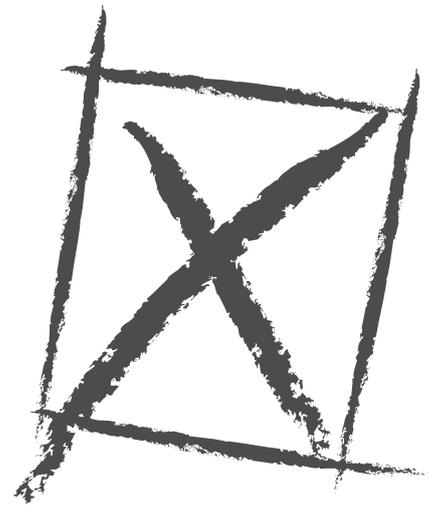

Nature is capable of extraordinary recovery.

Wilder
FUTURE

I want a wilder future. Nature matters!

Tell me what you and your party will do:

To tackle the crisis in the natural environment?

One very important action: Will you and your party commit to legislation that will help create connections for wildlife and tackle nature's decline head on?

To protect and revive our seas?

More specifically: Will you and your party make sure that our seas are managed properly, and important marine habitats are given the high level of protection they need and deserve?

To support farmers in contributing to nature's recovery?

For example: Will you and your party introduce an Agriculture Bill that pays farmers for helping wildlife's recovery and other positive environmental actions?

Nature is capable of extraordinary recovery.
