

Stockley Park

Head Office, Uxbridge, Hillingdon (London)

Stockley Park, an 88-acre business estate south of Uxbridge, has become the first business estate within the M25 to be awarded the Biodiversity Benchmark.

Stockley Park is dedicated to enhancing and maintaining the landscape. Achieving the benchmark has demonstrated

how Stockley Park manages the estate with biodiversity improvement as a priority. The Stockley Park's Biodiversity Action Plan has been purposefully provided the protection and enhancement of the wildlife. Stockley Park is now home to stag beetles, five different species of bats, 23 breeding bird species (including reed warblers), honey bees, water voles, newts and hedgehogs. The ten lakes are abundant with fish such as carp and pike. They have selected different species of plants to benefit pollinators, and wildflower meadows have been added to provide environments welcoming to both insects and birds. The protected Bee Orchid is researched and nurtured across the park.

"Achieving the Biodiversity Benchmark Award is testament to the dedication Stockley Park Estates Company Ltd has to the wildlife and landscape of the Park. The team has worked hard in making Stockley Park an area which can be enjoyed by occupiers, the community and the wildlife. We are proud our hard work has been recognized by the Wildlife Trusts to award Stockley Park the Biodiversity Benchmark". Pieter Borchardt, Estate Director at Stockley Park

Date Benchmark Achieved: 2021
